Abstract (en)

[origin: EP2101005A2] The machine has front wheelset (16) and pair of rear wheel (18, 20) displacing a cleaning machine (10) on a lower part of a wall of a gallery, and a scraping segment removing sediment from a base of the gallery. A transferring unit (36) transfers the removed sediments in a buffer hopper (44). A conveyor (50) transfers the stored sediment stored towards an exterior of the machine (10). Wheelsets (54-60) displace a mucking machine (12) on the lower part. A storage container (62) is mounted on the machine (12) for receiving the sediments transferred towards the exterior of the machine (10). An independent claim is also included for a method for cleaning a sediment deposited on a base of a gallery e.g. sewer.
