Abstract (en)
[origin: EP2101020A2] The arrangement (10) has an unlocking device (27) with a motor (25) for driving a connecting rod (18). A latch (31) is arranged at the rod and has an attachment stop, where an attachment (26) of the unlocking device is attached to the stop during movement of the attachment in an unlocking direction. The latch or the attachment is displaceably arranged against a restoring force, so that one of the latch or attachment is drawn away from the other of the latch or attachment during converging of the attachment and the latch in a direction that does not correspond to the unlocking direction.
