Abstract (en)
The invention concerns a device comprising a support structure (11, 40) and a rotating shaft (10, 36) having a centre axis (A) which rotating shaft (10, 36) and support structure (11, 40) are pivotable supported against each other by means of at least one hydrodynamic rotary bearing (16, 43, 44) comprising a first bearing part (17) and a second bearing part (19) pivotable relatively to each other, a lubricant (21) as well as a contact zone (20) between the first bearing part (17) and the second bearing part (19) at least when the hydrodynamic rotary bearing (16, 43, 44) is at rest, wherein the rotating shaft (10, 36) and the support structure (11, 40) are shaped in such a way and the hydrodynamic rotary bearing (16, 43, 44) is in such a way arranged on the rotating shaft (10, 36) and the support structure (11, 40) that the contact zone (20) of the hydrodynamic rotary bearing (16, 43, 44) is submerged in the lubricant (21) even when the hydrodynamic rotary bearing (16, 43, 44) is at rest.
