Abstract (en)

A method of generating or entering a password or passphrase on a computer system 1. The method comprises storing a plurality of sets of values in a memory 5 of the system 1, the values of each set defining respective elements which belong to a common domain, the domains of respective sets being distinct from one another, selecting at least one value from each stored set or from each of a plurality of the stored sets, and combining the selected values or elements thereof to form a password or passphrase.
