Abstract (en)
[origin: WO2008063049A1] A massage device (1) comprises at least one massage roller element (4) for massaging a body part and a support frame. The support frame comprises a support member (2) for positioning the massage device on a surface and at least one spacing member (3) coupled to the support member for rotatably supporting the massage roller element at a distance from the support member. The massage device according to the present invention is in particular suitable for use in combination with a vibration generating fitness machine (5), such that a vibrating massage may be performed by any person without an assisting other person. Such a massage is particularly advantageous as a warming-up and/or a cooling down when using the vibrating fitness machine.
