Abstract (en)
[origin: US2008152675A1] The invention relates to injectable pharmaceutical compositions for the prolonged release of at least one active principle, comprising at least one active principle in an aqueous phase of amphiphilic polymer, said aqueous phase being in the form of a dispersion in a continuous lipid phase. The composition is in the form of a water-in-oil emulsion comprising: a pharmaceutically acceptable, continuous lipid phase, an aqueous disperse phase containing at least one amphiphilic polymer and at least one active principle not covalently bonded to said amphiphilic polymer, and at least one pharmaceutically acceptable surfactant.
