Abstract (en)

[origin: DE102007002372B3] The seat has a seat part with pads, which extend from a fastener at the seat part to a vertical retaining belt (18) of a belt frame (16). The fastener is spaced at a distance from a rear end of the seat part. The pads are suspended with free ends in a hanger, which is formed in a holding belt. Two tension belts are provided within the seat part and run from a front fastener provided at the seat part to a connection with the holding belt along side edges of the seat part. Length of the tension parts is smaller than a distance between the front fastener at the seat part and the rear end.
