Abstract (en)
[origin: WO2008078306A2] The variable trim boat comprises a pair of hollow bodies (1), arranged on the sides of the boat (100) in symmetrical position with respect to the longitudinal axis, which stretch from a central position of the hull up to the stern area. The hollow bodies (1) comprise respective no-leakage-chamber box structures, isolated from the boat, suitable to be kept empty or filled up with water to improve the trim and the stability of the boat both in static and in dynamic conditions.
