Abstract (en)

[origin: WO2008071511A1] The present invention relates to a heat exchanger including at least first, second and third heat exchange portions (221; 222; 223) extending essentially in the same plane, wherein said array provides for independent fluid circulation in each of said heat exchange portions (221; 222; 223). The invention also relates to a system for managing the thermal energy generated by an automotive vehicle engine including such a heat exchanger. Application in the field of automotive industry.
