Abstract (en)  
[origin: WO2008064410A1] The present invention discloses a power supply control device to which can be attached a number of electrical device(s), such as a computer or AV equipment. The power supply device is able to determine and monitor standby power usage levels of the device(s) so that when the control device detects that the connected electrical device(s) are not being used power supply is removed from the device(s).
