Abstract (en)

[origin: EP1939760A1] The method involves creating a unique list indicating application data (D10, D30), in a portable electronic device e.g. universal serial bus key (20), and transmitting the unique list from the electronic device to a host machine (40) e.g. computer. Application data (D11) is stored on the device in persistent manner, where the application data (D11) includes the remote application data (D30) and the unique list is created from the application data (D10, D11). An independent claim is also included for a portable device connected to a host machine, comprising a microprocessor and a data memory.
