Abstract (en)

[origin: WO2008074807A1] The invention relates to a method and a system for authorizing at least one transaction by a bank system, wherein at least one client application handled by the bank system is connected to at least one server application outside the bank system. With the help of the client application, at least one transaction item provided for selection by the server application is selected. Furthermore, authorization of the transaction of at least one selected transaction item is requested during a bank application of the bank system. The transaction is authorized with the help of the bank application.
