Abstract (en)

[origin: WO2008087093A1] A conductor bar (10) for the stator of a generator comprises multiple internally positioned partial conductors (11) which are surrounded externally by an insulation layer (12) comprising impregnated glass/mica bands (13) wound around the partial conductors (11). To improve the mechanical adhesion between the partial conductors (11) and the insulation layer (12), at least one intermediate layer (17) is provided between the insulation layer (12) and the partial conductors (11).
