Abstract (en)

A transformable toy (A) which can be instantly transformed by merely reversibly changing its state between a horizontal state and a vertical state, without operating the toy (A) with an intention to carry out transformation, and surprises and excites users; and an accommodating case (P) for accommodating the transformable toy (A). The transformable toy (A) includes weight members (10) swingably disposed therein and is reversibly transformed between first and second configurations by using a movement of the center of gravity (g) of the weight members (10). The transformable toy (A) assumes the first configuration in the horizontal state and the second configuration in the vertical state. The accommodating case (P) includes a fixing device (52), for fixing a bottom surface of the transformable toy (A) to a bottom plate (50) of the accommodating case (P) when the transformable toy (A) is in the first configuration, and an abutment portion (56), which abuts with a rear portion of the transformable toy (A).
