Abstract (en)

[origin: EP2103529A1] The method involves pressing tobacco portions on a horizontal plane i.e. horizontal platform, by vertical forces and grouting. The tobacco portions are straightened and tilted to a vertical position. The tobacco portions are pressed into a portion bag. The tobacco portions in the portion bag are transported to a filling station via a portion conveyor. The tobacco portions are inserted into an open pocket (11) of a foil bag (10), where the foil bag comprises a front wall (12) and a rear wall (14). An independent claim is also included for a device for inserting portions of ductile filling material into a packing.
