Abstract (en)

A hanger may include a body for supporting a package from a rod. A support portion may extend from the body and may define a gap to receive the rod. The body may define a slot for receiving the tab and may include a first major face that fully encloses the slot. The body may also include a living hinge defining a fold axis. The living hinge may extend across the first major face on opposite sides of the slot and extend inline with the slot. In some examples, the support portion defines a J-hook. In some examples, the hanger is incorporated into a package assembly including a package configured to house a product and including a tab, wherein the tab extends through the slot to support the package from the rod with the hanger.
