Abstract (en)
[origin: EP2103756A2] The shelter has a roof (2) comprising a framework provided with two parallel rafters (13) extending along an axis (X). The rafters have supports (4) projecting along an axis (Z) perpendicular to the axis (X). Recesses are arranged between two supports, and blades (3) extend along an axis (Y) perpendicular to the axes (X, Z). The blades close the passage between the rafters, and cover the rafters in one of positions, where the blades are housed in the recess in another position. A driving unit drives the blades between the two positions in rotation.
