Abstract (en)

[origin: EP2103770A2] The arrangement has a connecting rod (4) movable from a locking position in which a leaf (1) is in a locked condition, into an opening position in which the leaf is in an unlocked condition. The rod is connected with a covering element (11). The element is transposable to close and release an opening in the leaf from a closed position into a release position. The rod is movable into a ventilation position. The element is brought into the release position by a coupling unit (13) during movement of the rod into the ventilation position, and is designed as an adjustable ventilation flap.
