Abstract (en)  
[origin: EP2104113A1] An efficient manufacturing method of not using the uranium as a raw material is provided as a method of manufacturing radioactive molybdenum <sup>99</sup>Mo which is parent nuclide of radioactive technetium (<sup>99m</sup>Tc) which is a radioactive diagnosis medicine. <sup>99</sup>Mo is manufactured efficiently by irradiating neutrons to the Mo solution in which Mo compound is dissolved in water in an irradiation capsule set up in the core of a nuclear reactor, generating <sup>99</sup>Mo by <sup>98</sup>Mo(n, <sup>3</sup>) reaction, and by collecting the Mo solution in continuous or batch processing.
