Abstract (en)

[origin: CA2670759A1] The invention relates to a toothbrush that is preferably electric and comprises a handle and an attachment which can be mounted on the latter. The attachment for a toothbrush of this type has a working head and a connecting piece that is connectable in a positive and/or non-positive fit to the toothbrush handle. An attachment of this type can be, in particular, an attachment brush for cleaning teeth, but may also consist of inter-dental cleaning equipment, gum massage heads or other attachment instruments for carrying out similar tasks in the oral cavity. According to the invention, the connecting piece is rigidly fixed to the toothbrush handle in order to obtain a zero-backlash connection that is tolerance-independent. To achieve this, at least one pivotable lever or toggle lever is provided to clamp the connecting piece to the toothbrush handle.
