Abstract (en)

[origin: FR2910341A1] The web (1) has optical fibers (2) arranged in warp or wet with a binding thread (3). The fiber has an invasive deformation and photocatalytic particles. A free end (6) of the fiber is arranged opposite to a light source (7) for transmitting a light and laterally emitting the light at the level of the deformation to activate the photocatalytic particles. A coating layer integrated with the photocatalytic particles are deposited on the fibers, where the particles are chosen from the group comprising a polymethyl methacrylate plastic, polycarbonate and cyclo-olefine.
