Abstract (en)

[origin: WO2008088266A1] A portable power tool with wireless communication with a stationary control unit for exchange of operation parameter values comprises housing (10) with a battery powered motor connected to an output shaft, an on-board operation control means, and a wireless communication means in the form of a communication module (22), wherein the communication module (22) is received in a docking portion (23) on the housing (10), and the docking portion (23) and the communication module (22) have matching electric connection means (25,26). The communication module (22) is one of a number of exchangeable communication modules (22a-c) all having identical electric connection means (25,26) for co-operation with the connection means of the docking portion (23) but comprise means for wireless communication according to different communication systems.
