Abstract (en)
[origin: WO2008116524A1] The invention relates to a handling device suitable for repositioning parts, wherein a handling part (6) which supports an end effector (5) can be displaced by a swivel arm kinematic (12) along a variable handling track (7). The swivel arm kinematic (12) has two articulated arms (16, 17), each having an inner shank (16a, 17a), and an outer shank (16b, 17b). The outer shanks (16b, 17b) support the handling part (6), and the inner shanks (16a, 17a) can be independently swiveled by means of a drive unit (14).
