Abstract (en)

[origin: WO2008075899A1] A method for controlling a fabric processing apparatus is provided. The apparatus includes a case that defines a processing space where fabric articles are processed. A steam supply device supplies steam to the processing space, and a dry air supply device supplies dry air to the processing space. The method includes supplying steam to the processing space by operating the steam supply device, and supplying dry air to the processing space by operating the dry air supply device before, after or during operating the steam supply device to increase a temperature of the processing space.
