Abstract (en)
[origin: WO2008077750A1] The invention relates to a refrigerating appliance (1) comprising an inner compartment (11) for storing refrigerated and/or frozen goods, a cold generator (13), a refrigerating appliance control system (12) for operating the cold generator (13), a mains connection (15) for supplying the cold generator (13) and the refrigerating appliance control system (12) with an electrical voltage, and an ice-making machine (4) arranged in the inner compartment (11). According to the invention, the ice-making machine (4) comprises its own control system (14) for its own operation, which controls all functions of the ice-making machine (4) independently of the refrigerating appliance control system (12). A connection is also provided from the ice-making machine (4) and the ice-making machine control system (14) to the mains connection (15) of the refrigerating appliance.
