Abstract (en)
[origin: EP2105206A2] The precipitator (1) has a channel wall (3) and a particle-containing exhaust gas (P) running in a flow direction through a flow channel (4). An electrode (5) extends in the flow channel in the flow direction for forming an electric field between the electrode and the channel wall, where a high voltage feed (6) energizes the electrode. An electrode support device (9) and a particle rejecting unit (8.1) are provided in the precipitator. The electrode is formed in such a manner that the electrode is partially integrated with the electrode support device.
