Abstract (en)
[origin: EP2105257A2] The jaws (2a, 2b) have holes (10a, 10b) for a clamping screw (11), where the jaw (2a) is connected with the jaw (2b) by the two holes in a clamping direction (S) with the clamping screw. The clamping jaws are adjacent to a workpiece support (7), and are clamped by the clamping screw. The workpiece support on a clamping surface comprises microteeth for form-fit holding of a workpiece in a clamping device (1). The microteeth have an elongated, prismatic form, and are alternately arranged in horizontal and vertical directions.
