Abstract (en)  
[origin: EP2105292A1] The device has a receptacle (4) for a pressing roller (13) such that the pressing roller can be located radially with respect to a perforating matrix (2) so that it can be shifted or displaced, and for providing radial pushing devices within the receptacle for radially shifting the pressing roller. The radial pushing devices are provided with an axial drive (14) and a radial output drive (9), which is in operative connection with the pressing roller, and a transmission unit for conveying the axial force acting on the axial drive on to the radial output drive. An independent claim is also included for a pelletization press.
