Abstract (en)
[origin: EP2105555A2] The lock (1) has a closing mechanism (3) provided between plates (5, 6) and arranged within a lock body. A bolt element (4) is movably arranged between a lock closing position and a lock opening position. The lock body includes a carrier body provided with a base plate section (7) and a side plate section (8). A lock case front (2) is mounted adjacent to the side plate section, which is arranged perpendicular to the base plate section. A covering plate (10) at the carrier body is mounted in opposite direction to the base plate section.
