Abstract (en)
An outwardly opening window assembly for mounting in a window opening, said window assembly comprising: a plate element, a window sash comprising a top sash element, a bottom sash element and two side sash elements, said window sash elements arranged at the periphery of said plate element, a window frame comprised of a top frame element, a bottom frame element and two side frame elements, said window frame elements arranged at the periphery of said window sash when the window assembly is closed and mounting fittings which connect at least one of the window sash elements to at least one of the window frame elements. The window assembly is further defined in that one of the window frame elements comprises a first surface which faces towards the outside of the window assembly and where, one of the window sash elements comprises a second surface and a third surface, said second surface being arranged such that it is located on the inner side of the plate element and such that it is facing said first surface of said frame member when the window is closed and said third surface being arranged such that it is facing the outer periphery of the window assembly and where said mounting fittings are fastened to said frame member via said first surface and to said sash member via said third surface. In this way, a window assembly is provided which is advantageous in a number of ways.
