Abstract (en)
Actuator arrangement (12), comprising a housing body (18) with a recess (20), and a solid state actuator unit (22) within the recess (20) with a longitudinal axis (A) being electrically coupable to a power supply, wherein the solid state actuator unit (22) comprises a first axial end area (30) designed to act as drive side and a second axial end area (32) facing an adapter (34) being designed and arranged such as to supply electric energy. A ring (36) is arranged intermediate the adapter (34) and the housing body (18), the ring (36) being designed and arranged such as to seal against an intrusion of liquid into the recess (20) and to provide an oxygen communication between the exterior of the actuator arrangement (12) and the recess (20).
