Abstract (en)

[origin: EP2105654A2] The light (1) has a light column (3) extending above from a light base (2). A light head (4) is arranged at the light column. The light head has a light unit whose light is delivered laminar to the lower surface over a light emitting surface (5) of the light head. The light head has another light unit whose directional light is delivered to the lower surface. The light emission direction of the latter light unit is changeable. The former light unit is assigned with a light influence element (7) for glare suppression of the laminarily delivered light.
