Abstract (en)  
[origin: WO2008061506A1] The invention related to a clothing upper part and a clothing lower part for people with restricted movement. The clothing upper part is vertically divided in the front middle thereof and both supports are divided horizontally. A closure element is provided on the edges of the divisions. The clothing lower part is designed in the form of trousers and comprises a back part and two side parts with ribbon sections connected to both sides and a front part only connected in the crotch region. The back part and front part and the ribbon sections have closure elements. The clothing lower part may only be fixed to the body of the person by connection of the ribbon sections provided on both sides of the back part and the whole clothing lower part may be closed by connecting the closure elements of the front part and the back part. According to the invention, people with restricted arm and/or leg movement do not as a rule require assistance dressing or undressing and can thus live independently at home longer. The invention provides such people with significant physical improvements including pain free putting on of clothes and furthermore, also psychological easement.
