Abstract (en)

[origin: WO2008074279A1] The invention relates to the production of a forged part (11) having at least one unilateral extension (8), particularly a segment shaft, wherein round material is pressed to a blank (10) having unilaterally accumulating material in a first mold (7) by lateral extrusion, and is subsequently forged in a forging die (15), wherein a favorable fiber orientation is obtained. The invention also relates to a forged part, and to a forging die.
