Abstract (en)

[origin: WO2008061766A1] The invention relates to a closing top (10) for a bottle, comprising a dispensing compartment (26) for dispensing a drink additive sealed in the dispensing compartment into the bottle. The closing top comprises a base body (20) in which the dispensing compartment is formed, the dispensing compartment comprising a flexible, deformable, hemispherical cover wall (27) and a breakable, circular bottom (28). The closing top also comprises a cover (30) provided with a central rod (33), the cover being able to slide in the base body in such a way that it can be axially moved in relation to the base body in order to press the cover wall of the dispensing compartment by means of the rod in such a way that the bottom of the dispensing compartment breaks and the sealed drink additive is released.
