Abstract (en)

[origin: EP2106910A1] The method involves applying a printing image (13) and reference position in the form of a marking or coding in or near the printing image on a printing plate (10). The reference position is connected with the printing image. One of the reference positions is detected by a reading device (26) depending on an attachment position of the printing plate at an attachment device as reference data.
