Abstract (en)

[origin: EP2107020A1] The device (1) has a set of saddle-shaped segments (10') forming a saddle-shaped roof for supporting printed products i.e. printed sheets, during conveying operation along a conveying path. A set of pusher segments (11) is arranged with the saddle-shaped segments to provide rear end stop for conveying the printed products. A set of alignment segments (12) is arranged with the saddle segments to provide front end stop for front edge of the printed products. A set of conveying elements (35-37) is coupled to the pusher segments and the alignment segments.
