Abstract (en)
[origin: EP2107191A2] The lock (1) has a lock housing (2) provided with a cuff (3), and a closing mechanism with a latch element i.e. door latch, within the lock housing. A driver element (4) is held for a reciprocal effect with a closing cylinder. A sector element (5) is manually shifted between selector positions (A, B, C) for adjusting function characteristics of the lock. An electrical unit (6) is provided for the reciprocal effect with the sector element. The electrical unit is designed as e.g. electrical detector, such as magnetic proximity sensor, where the electrical unit is held within the lock housing.
