Abstract (en)
[origin: EP2107285A2] A liquid distributor valve. This liquid distributor valve comprises a compartmented base body (1) being provided with a cover (3) and with several outlets (2) and one inlet (4), a rotatable obturator bell (5) being innerly arranged and having a shaft (7) projecting through said cover (3) and being governed by an externally arranged electronic control (6) being made up by an independent assembly being adapted to be fitted onto the base body (1). This valve is characterised in that the actuation on the shaft (7) of the obturator bell from the gearmotor (8) of the externally arranged electronic control (6) is carried out through a pinion (9) being driven by the shaft of the gearmotor (8) and enmeshed with a gear wheel (10) being linked to the shaft (7) of the obturator bell (5). The linking between the gear wheel (10) and the shaft (7) of the obturator bell (5) is accomplished by means of a tubular body (11) having an external thread (12) matching the thread (13) being provided in the inside of the neck (14) forming an extension of the gear wheel (10).
