Abstract (en)

The present invention relates to a server for use in delivery of data from a first terminal in a mobile platform to a second mobile terminal. The server comprises location receiving means for receiving position information related to the first terminal and/or the mobile platform. The server further comprises means for triggering a selection of a second mobile terminal from a plurality of available mobile terminal. The selection being based on the location information related to the first terminal and location information related to the available mobile terminals.
