Abstract (en)
[origin: EP2107660A2] The busbar connector (10) has an electrically conductive body unit (16) with two fork-like arranged axle stubs (18, 20) forming a recess (36, 38) for retaining a busbar, where the axle stubs are prestressed by using a spring element (22). The axle stubs are formed in single-piece with the body unit and are flexibly formed. The bus bar is clamped in a contacting position in the recess, and the axle stubs have a chamfer. The body unit has a mounting unit or a lug for the mounting unit. The recess is adjustable formed.
