Abstract (en)

[origin: WO2008040495A1] The invention relates to a device for the even stretch-forming of workpieces, having a tool upper part (3) and a tool lower part (4), which engages with the tool upper part, which can move with respect to each other. Both the tool upper part and the tool lower part each have at least two forming crimps (5, 7), spaced apart from each other on at least two sides, which engage in corresponding recesses (6, 8) of the tool upper part or the tool lower part.
