Abstract (en)

[origin: WO2008080847A1] The invention relates to a lift car (3) with a brake device (8) which is arranged in the region of the lift car for holding and braking the latter; the brake device (8) comprises: a brake unit (9) which can interact with a brake rail (7), an actuating device (10) which can generate an actuator force FA, and a connecting means (11) which connects the actuating device (10) to the brake unit (9) in a force-active manner in order to transmit the actuator force FA, wherein the brake unit (9) is in its open position in the unloaded position, and wherein the connecting means (11) is a drawing means (12).
