Abstract (en)

[origin: WO2008083864A1] A fitting, which is concealed in the rebate, for tilt and turn windows or doors, in which a casement or leaf (2), for pivoting at the upper and lower casement or leaf edge (4, 5), is held and guided in each case by a plurality of links (10) of which one fitting part (6) is provided in the region of the lower casement or leaf edge (5), said fitting part comprising a corner hinge (7) fastened to the casement or leaf (2) and a corner bearing (9) coupled fixedly to a frame (1) via a bearing rail (8), wherein links (10) have a bolt-like hook (13,14) at at least one of the free ends (11, 12), and at least one hook (14) has corresponding holding means (15) for the releasable fixing to the corner hinge (7), wherein the corner hinge (7) and the corner bearing (9) provide means (16,17) for positional adjustment in the longitudinal direction of the rebate, such that, when the corner bearing (9) is installed and connected to the corner hinge (7), the fitting parts take up the rotationally adjusted position, and the hooks (13, 14) of the links (10) are aligned with the longitudinal centre plane (38) of the arrangement of fitting parts, wherein the hooks (13, 14) in the corner bearing (9) and the holes (21, 22) for the connection of the corner bearing (9) to the corner hinge (7) are in a congruent position with respect to one other in the longitudinal direction of the fitting part (6) and, during installation, at least one hook (14) can be clipped into the hole (22) and thus, in the installed state, brings about a non-displaceable connection which is fixed in a manner such that it can always be released.
