Abstract (en)

[origin: FR2911443A1] The machine has a stator (1) with radial slots (11) formed in armature coils (12), and a rotor (4) with tooth (6) located opposite to the slots of the stator. One of tooth of the rotor corresponds to a number of product of M and 2P of the slots, where M is equal or higher than one and P that indicates the number of phases of the machine. A fixed exciting part (15) with an electromagnetic coil or a permanent magnet and a magnetic circuit makes the circulating of magnetic flux between the stator and rotor.
