Abstract (en)

[origin: WO2008080893A1] The invention relates to a method for producing electrically conductive surfaces on an electrically non-conductive substrate, comprising the following steps: a) transferring a dispersion containing particles suitable for electroless coating and/or electrocoating from a carrier to the substrate by irradiating the carrier with a laser, b) at least partially drying and/or curing the dispersion transferred to the substrate to form a base layer, c) electroless coating and/or electrocoating of the base layer.
