Abstract (en)  
[origin: EP2108512A2] The folding device (10) has a sensor (22) which is positioned along the transport track of the specimen in a transport direction of the printing substrate. The sensor detects the specimen in a metrological manner, and transmits a measuring signal to a controller. The controller determines the position of the specimen relative to a machine angle depending on the measuring signal provided by the sensor. The controller produces or generates a stopper or an alarm depending on the determined position of the specimen.
