Abstract (en)

[origin: EP2108757A1] The method involves bending a roll-shaped profile so that a blade (1) is fastened to an external wall and another blade (2) is fastened to assembly strip of facade elements. The former blade and latter blade are arranged to each other in ninety angle degree. The free end (5) of the latter blade is flat pressed. An independent claim is included for an assembly bracket for fastening facade elements at wall.
