Abstract (en)

[origin: EP2108813A1] The device (12) has a cooling circuit (2) connected with an internal combustion engine in a heat conductive manner. The cooling circuit comprises a cooling circuit pump (3) for circulating a coolant in the cooling circuit. A pre-heating branch (7) is arranged parallel to the cooling circuit pump, and is connected with the cooling circuit. A bypass branch (13) comprises a bypass heat exchanger (17) and a bypass pump (16), where the bypass branch is connected with the pre-heating branch by a bypass adapter (14), and is connected with the cooling circuit by another bypass adapter (15).
