Abstract (en)

[origin: EP2109226A2] The device (30') has a radiofrequency unit (11) comprising a radiofrequency signal output and/or input (20) connected to a terminal (21') of a tuning circuit (17') by a high frequency link (19). The tuning circuit has units constituting a coil (L2) and capacitors (C3, C4) for blocking conduction of radiofrequency signals on a conductor between terminals (22', 23'), and is traversed between the terminals (22', 23') by alternating current flowing in the conductor and supplying an electrical load. An independent claim is also included for a home-automation device comprising an electrical load and ensuring a function of comfort, energy management and/or safety in a building or surroundings.
